

# What patients are saying about SmartDose™ technology

The VIAspire Oxygen Portable 300 and 600 feature SmartDose technology

## What's special about SmartDose technology?

Patient tests show the VIAspire™ Oxygen Portable, with its proprietary SmartDose technology, helps patients breathe better, even as activity levels vary. It adjusts the oxygen flow automatically—helping maintain higher saturation levels than continuous flow and fixed-dose devices, so as a patient's respiratory rate increases, the oxygen dose increases.

We hope the advantages of SmartDose technology lead to higher quality of life. But don't take our word for it; take a look at the testimonials below...

**"...I was getting lots of extra oxygen pulses, one right after the other."**

I did the treadmill today for 30 minutes. My SpO<sub>2</sub> reading was 95/118—excellent. Maybe my breathing pattern changes at **3mph**, but I was getting lots of extra oxygen pulses, one right after the other.

**"My activities varied today... I didn't take any oximeter readings, but I was never breathless."**

My activities varied today from caulking the top of a shower stall, to screwing shelves into the wall, to putting light-switch plates back on. I didn't take any oximeter readings, but I was never breathless.

**"The Portable 300 still had liquid oxygen, even though I had used it for 9 hours. Incredible."**

I did not fill the Portable 300 until we were ready to go to a birthday party for several of our grandchildren. I went on the Portable 300 at 2:30 p.m. and used a flow setting of 1 the entire day while sitting and slowly moving around our son's house. I continued to use the portable on a setting of 1 for the rest of the day while reading the newspaper, watching TV, and standing to work on a picture puzzle. I took off the portable at 11:30 p.m. The Portable 300 still had liquid oxygen, even though I had used it for 9 hours. Incredible.

**"The Portable 600 gave me 14 hours of usage today... Wonderful equipment."**

The Portable 600 gave me 14 hours of usage today and it still had oxygen in it when I went to bed. Wonderful equipment.
